

Welcome to Moore Catchment Council's Birds on Farms video series

for the State NRM project:

Improving Habitat and Connectivity in the Farming Landscape for Birds in the Moore River Catchment

This DVD contains several videos, and links to other videos on YouTube, discussing the bird habitat value of planted and remnant vegetation in the farming landscape of the Moore River Catchment, as well as the perspectives of several landholders who have protected areas on their farms for the conservation of flora and fauna.

Join ornithologist, Andrew Huggett, on his visits to farms in the Moore River Catchment to see how birds use areas of planted and original vegetation on farms.
